

# Retail Companies Need Stronger Security Posture as They Increase Production Use of Public Cloud

## 69%

of retailers believe they will be running more than one-third of their production workloads on public cloud infrastructure 24 months from now.

As retail organizations increase their usage of public cloud infrastructure services, they need to ensure security and monitoring across their entire multi-cloud deployments. The use of public cloud drives the need for greater PCI compliance and stronger security postures. GigaSECURE® Cloud from Gigamon provides centralized orchestration and single-pane-of-glass visualization across on-premises and public cloud environments. Go beyond CSP-native tools with the capability and efficiency of your existing security monitoring solutions, extended across the multi-cloud landscape.
