Gigamon Visibility Platform for Azure Technology Preview

September 27, 2017

On September 27, Gigamon announced that it is extending its data-in-motion Visibility Platform to Microsoft Azure. The Visibility Platform for Microsoft Azure is a cloud-native network traffic visibility solution that enables enterprises to extend their security posture to Azure, assuring compliance and accelerating the time to detect threats to mission-critical applications.

This announcement is timed with the first day of [Microsoft Ignite](#) September 25-29. Sesh Sayani, Director of Product Management, will be presenting in the breakout session “Monitoring, diagnosing and debugging with Azure networking” on September 29 at 9:00am EST. A recording of this session will be available on the Microsoft Ignite Website after the event.

What are we announcing?

Gigamon is announcing a technology preview of the Visibility Platform for Microsoft Azure, which is being showcased at Microsoft Ignite Sept 25-29. IT, cloud and security architects who are responsible for charting a cloud strategy for their enterprise can now obtain visibility into data-in-motion whether in Microsoft Azure, Amazon Web Services, a private cloud or on-premises infrastructure. The Visibility Platform provides pervasive and consistent visibility that can be used by security operations teams to secure mission critical workloads regardless of location.

Will my current security and monitoring tools be supported?

Yes – a common set of cloud-native tools are supported such as WireShark, Bro IDS, SecurityOnion, NTopNG in addition to market-leading, commercial tools such as RSA NetWitness Suite. If you need more information, please email azure@gigamon.com.

How can I try this for myself?

We are currently gathering interest for an Azure Beta Program. If you are interested visit www.gigamon.com/azure to sign up.

When is the Gigamon Visibility Platform for Azure available?

General availability is expected to be Q1 2018¹.
